

## **Technical Specs / Equipment requirements:**

Venues / Event Organizers are required to supply a fully powered speaker system with mixing desk for Athron's performance.

The following equipment is needed as the minimum set up (larger events / venues will require more speakers as directed by your AV company):

- 2 x Front of house speakers.
- 1 x foldback monitor speaker.
- 1 x microphone (Cannot be wireless) plus cable / stand.
- 2 x DI box with cables to mixing desk.
- 1 x mixing desk with minimum 2 channels with in built reverb FX.
- access to electricity points

Please also be aware that if performing on the beach or an outdoor area with an unstable surface, a platform / carpet or something similar will be required for the performance space. A relatively solid surface is required for Athron's guitar pedals to be set up comfortably, without the danger of damage from sand, dirt or water.

If needed, Athron can organize the sound system at an extra cost according to what is needed.
